

The Challenges: Connectivity across 7 Locations

- Coverage for classrooms, libraries, cafeterias, gymnasiums, common areas, offices, and facility parking lots.
- 7 Locations – One network across 5 schools and 2 admin locations.
- 3000 student, staff & visitor concurrent users

The Solution: Amer Wi-Fi Key Management Features:

- Remote Management Capabilities: One administrator manages all locations in real time from his desk, reducing network down time and service calls.
- Business Grade Functionality
 - Full district coverage
 - Remote management
 - Enhanced security with Individual Device Authentication (IDA)

Summary:

Boaz City School District completed a 150 Access Point Wi-Fi upgrade. 5-Year Total Cost of Ownership for 150 end-point system including CloudCommand controller software is *less than \$100 per point per year.*

Plug&Connect Simplicity

Self configuring APs deploy in minutes instead of hours. Administrators can even register devices in their offices and mail them to customers to plug in.

Intuitive, powerful interface

CloudCommand's™ browser-based dashboard delivers real-time network statistics and management tools. Access it anywhere through the Internet!

Enhanced Security

Patented Individual Device Authentication (IDA) delivers enhanced, two-factor security enabling adjustment of individual users and network usage monitoring per device.

Advanced Hotspot

CloudCommand™ makes it easy to add advanced hotspot functionality to your network. The hotspot network provides Internet access while keeping users from accessing the local network resources through firewall and network isolation. A customizable captive portal gives access via a full range of options including shared password, individual passcode, and SMS tokens. Internet access can be limited according to duration of access or total data transferred.

Single point of management for multiple customer sites

One user interface delivers anytime, anywhere access to all of your wireless customers across multiple geographies. Administrators can remotely view multiple customer networks simultaneously and perform real-time management tasks.

"Since 2011, Boaz City School District has successfully implemented switching and wireless systems from Amer Networks. Boaz District now uses more than 150 wireless access points supported by Layer 2 PoE switching systems from Amer."

"Amer's Cloud-based solution exceeded our operational requirements from Day One. Students and staff effortlessly connect across campuses and between buildings. Features such as enhanced security and network monitoring enable us to provide an online environment that is safe, controlled and powerful."

- Wayne Caudle, Technology Director
Boaz CSD , Alabama

Take Control of Your Network

Enterprise-type capabilities such as plug-and-connect deployments, real-time remote management, enhanced security and hotspot customizations empower administrators to manage networks easily and efficiently through the Cloud, saving time and money. Additionally, Amer Wi-Fi creates opportunities for managed services providers (MSPs) to build new and profitable recurring revenue streams by offering real-time Wi-Fi management services.

Amer Networks systems are available on the NYS public sector technology contract. Please contact us for your local technology re-seller.
